

Concept #1

Top Area
to display
selected color

Bottom
Area to display
selected color

Concept #2

Concept #4

Display ~~numbers~~
for each color.
1 for most left
9 for most right

#TO-DO

Drawing Pad

- 1) Don't clear bg unless key pressed (esc, space, delete)?
 - 2) Have selectable colors (red to white) (white should act as eraser)
 - 3) Change "brush" size via arrow keys
 - 4) Make shapes automatically as "UI" (display current color mainly)
-

#WIP log

- So first was making it not clear bg automatically, which is easy
- Then I needed to display colors that are available without messing with the user's selected color.
 - So before drawing any "UI", I save their color to a var, then apply that var to draw fill color after the UI logic
- Then had to use grade 4 math to evenly spread the color choice blocks on the bottom.
- Then to make a big line at the top to show current color.
